www.ecorecommercial.com
I. JOB SITE CONDITIONS
   A. Installation should not begin until after all other trades are finished in the area. If the job requires
      other trades to work in the area after the installation of the floor, the flooring should be
      protected with an appropriate cover.
   B. Areas to receive flooring should be weather tight and maintained at a minimum uniform
      temperature of 65˚ F (18˚ C) for 48 hours prior to, during, and after installation.

II. SUBFLOORS
   A. ECOfit rolls may be installed over concrete, approved Portland based self-leveling materials, and
      wood. Gypsum based patching and leveling compounds are not acceptable.
   B. Wood Subfloors: Wood subfloors should be double construction with a minimum thickness of 1”.
      The floor must be rigid, free from movement, and have at least 18” of well-ventilated air space
      below.
   C. Underlayments: The preferred underlayment panel is APA underlayment grade plywood,
      minimum thickness of 1/4”, with a fully sanded face.
      Note: Particle board, chip board, Masonite, and lauan are not considered suitable underlayments.
   D. Concrete Floors: Concrete shall have a minimum compressive strength of 3000 psi. It must be fully
      cured and permanently dry.

III. SUBFLOOR REQUIREMENTS AND PREPARATION
   A. Subfloor shall be dry, clean, smooth, level, and structurally sound. It should be free of dust,
      solvent, paint, wax, oil, grease, asphalt, sealers, curing and hardening compounds, alkaline salts,
      old adhesive residue, and other extraneous materials, according to ASTM F710.
   B. Subfloor should be smooth to prevent irregularities, roughness, or other defects from
      telegraphing through the new flooring. The surface should be flat to the equivalent of 3/16” (4.8
      mm) in 10 feet (3.0 m).
   C. Mechanically remove all traces of old adhesives, paint, or other debris by scraping, sanding, or
      scarifying the substrate. Do not use solvents. All high spots shall be ground level and low spots
      filled with an approved cementitious based patching compound.
   D. All saw cuts (control joints), cracks, indentations, and other non-moving joints in the concrete
      must be filled with an approved cementitious based patching compound.
   E. Expansion joints in the concrete are designed to allow for expansion and contraction of the
      concrete. If a floor covering is installed over an expansion joint, it more than likely will fail in that
      area. Expansion joint covers designed for resilient floor coverings should be used.
   F. Always allow patching materials to dry thoroughly and install according to the manufacturer’s
      instructions. Excessive moisture in patching material may cause bonding problems or a bubbling
      reaction with the E-Grip III™ adhesive.

HAZARDS:
SILICA WARNING - Concrete, floor patching compounds, toppings, and leveling compounds can contain
free crystalline silica. Respirable crystalline silica (particles 1-10 micrometers) can be produced by
cutting, sawing, grinding, or drilling. Respirable silica is classified by OSHA as an IA carcinogen and is
known to cause silicosis and other respiratory diseases. Avoid actions that cause dust to become
airborne. Use local or general ventilation, or protective equipment, to reduce exposure below applicable
exposure limits.
ASBESTOS WARNING - Resilient flooring, backing, lining felt, paint, or asphaltic “cutback” adhesives can contain asbestos fibers. Avoid actions that cause dust to become airborne. Do not sand, dry sweep, dry scrape, drill, saw, beadblast, or mechanically chip or pulverize. Regulations may require that the material be tested to determine asbestos content. Consult the documents titled, “Recommended Work Practices for Removal of Existing Resilient Floor Coverings,” available from the Resilient Floor Covering Institute.

LEAD WARNING - Certain paints can contain lead. Exposure to excessive amounts of lead dust presents a health hazard. Refer to applicable federal, state, and local laws and the publication, “Lead Based Paint: Guidelines for Hazard Identification and Abatement in Public and Indian Housing,” available from the United States Department of Housing and Urban Development.

G. Moisture must be measured using the RH Relative Humidity test method per ASTM F2170 standard. Moisture content should not exceed 85% RH. If the levels exceed the limitations, the installation should not proceed until the situation has been corrected.

H. In the event that a moisture mitigation system is required, it must conform to the ASTM F3010 Standard Practice for Two-Component Resin Based Membrane Forming Moisture Mitigation Systems for use Under Resilient Floor Coverings.

I. It is essential that pH tests be taken on all concrete floors. If the pH is greater than 9, it must be neutralized prior to beginning the installation.

J. Adhesive bond tests should be conducted in several locations throughout the area. Glue down 3’ x 3’ test pieces of the flooring with the recommended adhesive and trowel. Allow to set for 72 hours before attempting to remove. A sufficient amount of force should be required to remove the flooring and, when removed, there should be adhesive residue on the subfloor and on the back of the test pieces.

K. It is essential that pH tests be taken on all concrete floors. If the pH is greater than 9, it must be neutralized prior to beginning the installation.

L. Adhesive bond tests should be conducted in several locations throughout the area. Glue down 3’ x 3’ pieces of the flooring with the recommended adhesive and trowel. Allow to set for 72 hours before attempting to remove. A sufficient amount of force should be required to remove the flooring, and there should be adhesive on the subfloor and the back of the flooring.

IV. Material Storage and Handling

A. Material should be delivered to the job site in its original unopened packaging with all labels intact.

B. Roll material should always be stored lying down. Storing rubber on end will curl the edges, resulting in permanent memory of the material. Do not store rolls higher than 4 rolls or for more than 6 months.

C. All edges with memory curl should be straight cut before installation. In some instances it may be necessary to weigh down the seam until adhesive develops a firm set.

D. Inspect all material for visual defects prior to beginning the installation. No labor claim will be honored on material installed with visual defects. Verify the material delivered is the correct style, color, and amount. Any discrepancies must be reported immediately before beginning installation.

E. The material and adhesive must be acclimated at room temperature for a minimum of 48 hours before starting installation.
NOTE: ECOsurfaces flooring is manufactured from recycled materials and slight variance in shade and color chip dispersion is normal. It is the installer’s responsibility to inspect all products to ensure the correct style, thickness, and color. Any moderate to severe discrepancies should be reported immediately before beginning installation.

V. Field Lamination – Step 1 – Installation of the Underlayment Pad

A. Begin by dry-laying rolls to allow product to relax for a minimum of two hours. Roll material is stretched slightly when it is rolled at the factory. At the job site the installer should allow all rolls to relax for a minimum of two hours before cutting to fit.

NOTE: Underlayment will be laid perpendicular to the direction of the ECOfit finished flooring material.

B. After all above procedures are performed, begin application of Ecore’s E-Grip III one-component, zero-VOC urethane adhesive. Apply E-Grip III to the substrate using recommended 1/16” square notch trowel. Take care not to spread more E-Grip III than can be covered by flooring and rolled within 30 minutes. The open time of the adhesive is 30–40 minutes at 70° F and 50% relative humidity.

NOTE: The open time of adhesive is affected by temperature and humidity. High temperatures and high humidity will cause the adhesive to set-up quickly. Low temperatures and low humidity will cause adhesive to cure at a slower rate. The installer should monitor on-site conditions and adjust open time accordingly.

C. Carefully lay the material into the wet adhesive. Do not let the material drop as this will cause air to be trapped beneath the flooring.

D. Continue this process for each consecutive drop. Work at a pace so that you are always folding material back into wet adhesive. Do not allow E-Grip III to cure on your hands or the flooring. Immediately wipe off excess adhesive with a rag dampened with mineral spirits. Cured adhesive is very difficult to remove. We strongly suggest wearing gloves when using E-Grip III.

E. Immediately roll the floor with a 75-100 lb. roller to ensure proper transfer of adhesive. Overlap each pass of the roller by 50% of the previous pass to ensure that the floor is properly rolled. Roll the width first, then the length. Re-roll again after 30–45 minutes.
ECOfit & ECOfit Plus Field Lamination

F. Hand roll all seams after the entire floor has been rolled. If some seams are gapping, hold them together temporarily with masking tape. Do not use duct tape as it may leave a residue on the floor. Remove tape after adhesive has developed a firm set.

G. Keep foot traffic off the floor for a minimum of 24 hours. Foot traffic and rolling loads can be detrimental to the installation, causing permanent indentations or bubbles in the uncured adhesive. After completion of step 1 and allowing the adhesive to cure for 24 hours, you can begin step 2.

VI. Field lamination – Step 2 – Skim Coating the Underlayment Pad

A. Using a flat trowel, apply E-Grip III at a rate of 80–100 sq. ft. per gallon over entire ECOfit underlayment pad. This will leave a seamless appearance and create one large monolithic layer in which to install the finished flooring. Adhesive layer should be as thin as possible.

B. Allow skim coat to dry approximately six hours before proceeding with dry-lay of finished flooring. You may begin installation of the finished flooring when the adhesive is not tacky to the touch.

VII. Field Lamination – Step 3 – Preparation of the ECOfit Finished floor surface

A. All ECOsurfaces rolls must be unrolled and installed in the same direction. Rolls are labeled with batch numbers and roll numbers. Do not mix batch numbers together and install all rolls in consecutive order. See Diagram 1.
ECOfit & ECOfit Plus Field Lamination

B. Note: Custom roll lengths eliminate the possibility of the rolls being manufactured and numbered in the customer’s desired installation sequence, and Ecore cannot be responsible for any resulting shading issues.

C. Roll material is stretched slightly when it is rolled at the factory. At the job site the installer should allow all rolls to relax for a minimum of two hours before cutting to length and width.

D. Cut the first sheet at the required length including enough to run up the wall and overlap for seaming at each end.

E. Position the first sheet against the wall and square with the room.

F. Cut second sheet with proper extra length.

G. Position second sheet of 3.2mm material with a 2” overlap over the first roll at the seam for 48” wide rolls, and 5” overlap for 51” wide rolls.

H. Repeat for each consecutive sheet necessary to complete the area or those rolls that will be installed that day.

SEAMING METHODS

3.2mm thick material: Double cut by placing a 4” wide scrap of material under the seam area. Using a straight edge and new razor blade, hold the knife straight up and down and cut through both pieces in one cut.

VIII. Field Lamination – Step 4 – Adhering the ECOfit Finished floor surface

A. After all above procedures are performed, begin application of E-Grip III Ecore’s recommended one-component, Zero VOC polyurethane adhesive. Apply E-Grip III to the underlayment pad using a 1/16” x 1/32” x 5/64” U-notch trowel.

B. Spread adhesive using proper notched trowel. Take care not to spread more E-Grip III than can be covered by flooring within 30 minutes. The open time of the adhesive is 30–40 minutes at 70° F and 50% relative humidity.

NOTE: The open time of adhesive is affected by temperature and humidity. High temperatures and high humidity will cause the adhesive to set-up quickly. Low temperatures and low humidity will cause adhesive to cure at a slower rate. The installer should monitor on-site conditions and adjust open time accordingly.
C. Fold over second half of first roll and half of second sheet. Spread adhesive. At seam area spread adhesive at 90 degrees to seam to eliminate excessive adhesive oozing up at seam. Roll material. See Diagram 2.

D. Carefully lay the material into the wet adhesive. DO NOT let the material drop because this will cause air to be trapped beneath the flooring.

E. Continue the process for each consecutive drop. Work at a pace so that you are always folding material back into wet adhesive.

**NOTE:** Never leave adhesive ridges or puddles, they will telegraph through the material.

F. **Do not allow E-Grip III to cure on your hands or the flooring.** We strongly suggest wearing gloves when using E-Grip III.

G. Immediately wipe off excess adhesive from floor with a rag dampened with mineral spirits! Cured adhesive is very difficult to remove. Then wipe off the mineral spirits with a rag damp with water. **NOTE:** Use mineral spirits sparingly. Saturating the rubber with mineral spirits may cause the adhesive to be pushed too deeply into the pores of the rubber.

H. Immediately roll the floor with a 75-100 lb. roller to ensure proper transfer of adhesive. Overlap each pass of the roller by 50% of the previous pass to ensure that the floor is properly rolled. Roll the width first then the length. Re-roll again after 30-45 minutes.

I. Hand roll all seams after the entire floor has been rolled. If some seams are gapping, hold them together temporarily with masking tape. Do not use duct tape as it will leave a residue on the floor. Remove tape after adhesive has developed initial set, approximately 2 hours.

J. It may be necessary to weigh down the seam until the adhesive sets. Boxes of cove base work well. Cover the entire seam. If some seams are gapping, hold them together temporarily with masking tape or blue painter’s tape. Do not use duct tape as it will leave a residue on the floor. Remove tape after adhesive has developed a firm set (approximately 2 hours). Ecore will not be responsible for residue left behind from tape of any kind.

K. Keep foot traffic off the floor for a minimum of 24 hours. Keep rolling loads off floor for a minimum of 72 hours. Foot traffic and rolling loads can cause permanent indentations or adhesive failure.
important information for the specifier

ecore recommends our environmentally friendly maintenance products and procedures for ECOfit.

proper protection and maintenance of ECOfit post-installation should be specified by the architect/designer. ECOfit products should not be subject to construction debris and potential damage caused from heavy duty construction activities.

floor protection
the specifier should include specification details to protect the floor post-installation and until job construction is complete, such as covering the entire floor with paper or another floor covering device (plastic, plywood, etc.) until construction is completed and thorough cleaning and maintenance can be implemented.

assignment of cleaning and maintenance
the specifier should determine and assign the responsibility for the initial cleaning and finishing. this responsibility should be specifically assigned to the flooring contractor, general contractor, maintenance contractor, or owner.

</table>

A. Initial Cleaning
   NOTE: Sealer should have 48 hours minimum to cure before introducing moisture.
   1. Remove all surface soil, debris, sand, and grit by sweeping or vacuuming.
   2. Scrub floor with Ecore’s recommended E-Cleaner, using a buffer or auto scrubber with tool / pad from table above. We recommend a 175 RPM buffer or auto scrubber. If soil is minimal, a microfiber mop may be used.
   3. Pick up remaining residue with a wet vac and damp mop floor. Allow floor to thoroughly dry.

B. Daily/Weekly Cleaning
   1. Remove all surface soil, debris, sand, and grit by sweeping or vacuuming.
   2. Damp mop or scrub floor using Ecore’s recommended E-Cleaner or equivalent with tool / pad from table above.
   3. Clean remaining residue from floor with a wet vac and damp mop floor. Allow floor to dry thoroughly.

C. Heavy Soil Cleaning
   1. Remove all surface soil, debris, sand, and grit by sweeping or vacuuming.
   2. Scrub floor using ECORE’s recommended E-Cleaner with tool / pad from table above. Follow “Dilution” above.
   3. Pick up remaining residue with a wet vac and damp mop floor. Allow floor to dry thoroughly.

Note: If area is too small for a buffer or auto scrubber, a nylon deck brush may be used to remove scuff marks or heavy soil. Brush should be approximately 22 gauge.

CAUTION – A “standard” black pad should be the most aggressive pad used. The use of a high productivity black pad such as 3M’s 7300 series will act as a sander and damage the surface of the rubber. Ecore assumes no liability in the event of damage to the rubber in the removal process.
ECOguard is considered a permanent sealer and not intended to be stripped from the rubber as a standard procedure. This procedure is for restorative maintenance purposes only.

**Approved Cleaning / Stripping Pads**

</table>

**IMPORTANT MAINTENANCE TIPS**

- Use high CFM vacuum to pick up dust.
- Wait for floor to dry thoroughly before applying floor finishes, usually 24 hours.
- Apply only thin coats of floor finishes with finish mop.

**Note:** If area is too small for a buffer or auto scrubber, a nylon deck brush may be used to remove scuff marks or heavy soil. Brush should be approximately 22 gauge.

**D. ECOguard Clear Coat Sealer Procedures**

**Description**

ECOguard is a water based, clear polyurethane maintenance coat. ECOguard is formulated for interior applications.

**Tools / Materials Required**

- Safety Glasses
- Latex or Rubber Gloves
- 21” paint tray or rectangular mop bucket for sealer
- Applicator Trim Pads
- Safety / utility knife
- Trash bags
- 18” stir sticks
- Drill
- Rags
- Microfiber Mop
- Microfiber Mop Cover
- Paint mixer paddle

**Surface Preparation**

- An improperly prepared surface can act as a bond breaker and result in a project failure. It is important to remove all dirt, grease, wax, oil, paint or other contaminants before applying the ECOguard. ECOguard can be applied over the existing factory applied finish after all construction debris and soil have been removed from the surface.

**Precautionary Measures**

- Allow ECOguard to cure for 24 hours before introducing foot traffic.
- Allow ECOguard to cure for 48 hours before cleaning, rolling chairs or dollies.
If traffic and/or rolling loads need to be introduced earlier than listed above, the surface must be protected from damage.

- Remove ECOguard spills and drips immediately from other surfaces before dry.
- Do not re-use microfiber pads after applying ECOguard.
- Seal floor in one step rather than in sections for best results.
- If sealer dries on microfiber pad, replace with new microfiber pad.
- Sealer will obtain full strength in 5-7 days. Care should be taken during the first 5-7 days to prevent damage to the coating. Extra coats will extend the curing cycle.
- String mops or other unapproved applicators to apply ECOguard may result in a poor application of the sealer and complete removal may be required.
- Work from one side of the room to the other using a scrubbing motion with microfiber mop keeping a wet edge.

Application Methods

1. Application Of ECOguard Over Uncoated ECOsurfaces
2. Application Of ECOguard Over Existing ECOguard
3. Removal / Stripping of ECOguard Sealer

1. Application Of ECOguard Over Uncoated ECOsurfaces
   - IMPORTANT! Stir the ECOguard thoroughly before application to ensure consistent sheen.
   - Stir sealer for 3-5 minutes or until all sediment at bottom of pail is mixed in.
   - Safety glasses should be worn when mixing, pouring or applying ECOguard.
   - Apply first coating of ECOguard to the rubber surface using Ecore’s recommended Microfiber Mop. An applicator trim pad may be used for areas around the perimeter.
   - Additional one to two coats are recommended and ample amount of time is required between coats. Allow each coat to dry thoroughly to touch before applying the next coat, about 2 - 4 hours.
   - Over unfinished rubber the coverage rate is approximately 400-500 sq ft per gallon. Second and Third coat coverage approximately 600-800 sq ft per gallon.
   - Apply ECOguard when surface temperature is 65 degrees Fahrenheit or higher and maintained for 72 hours before and after installation.
   - Wear rubber or latex gloves when applying the ECOguard. Sealer will not harm the skin but is difficult to remove once it dries. Wash hands immediately after contact with ECOguard with soap and water.
   - Allow ECOguard to cure for 48 hours before cleaning the surface.

2. Application Of ECOguard Over Existing ECOguard
   - IMPORTANT! Stir the ECOguard for 3-5 minutes or until all sediment at bottom of pail is mixed up into solution before application to ensure consistent sheen.
   - Factory coated product should not require additional field coats. Should an additional coat be requested, one should suffice.
   - Prepare surface and remove all dirt, grease, wax, oil, paint, construction debris or other contaminants before re-applying the ECOguard. Clean the surface thoroughly with a buffer or auto scrubber using a 3M 5100 Red or equivalent pad. Keep in mind that these pads will slightly
ECOfit & ECOfit Plus Field Lamination

abraide the finish and continued use will remove the sealer. Slightly abrade the finish creates an acceptable surface on which to apply the new finish coat.

- Safety glasses should be worn when mixing, pouring or applying ECOguard.
- Wear rubber or latex gloves when applying the ECOguard. Sealer will not harm the skin, but is difficult to remove once it dries. Wash hands immediately after contact with ECOguard with soap and water.
- Apply ECOguard when surface temperature is 65 degrees Fahrenheit or higher and maintained for 72 hours before and after installation.
- Apply one coat of ECOguard using using a Microfiber mop and trim pad as desired.
- Additional coats are acceptable. Allow each coat to dry thoroughly before applying the next coat, about 2-4 hours.
- Coverage rate is approximately 600-800 sq. ft. per gallon over previously coated surfaces.
- Allow ECOguard to cure for 48 hours before cleaning the surface.

3. **Removal / Stripping ECOguard Sealer**

- ECOguard is difficult to completely remove from the surface of the rubber and may take several attempts. ECOguard is removed by abrasion using an approved stripping pad. Anything used to chemically remove the sealer will jeopardize the integrity of the rubber.
- To remove, use E-Strip 32 oz. per gallon water and a buffer fitted with a 3M 7200 Black or 7200 Brown or equivalent stripping pad.
- Apply a liberal amount of diluted stripper to floor and work buffer from one side to the other until sealer is removed. Successfully removing the sealer may require several passes with the buffer or auto scrubber.
- **CAUTION –DO NOT USE a high performance black pad such as 3M’s 7300 series. It will act as a sander and will damage the surface of the rubber.** Ecore assumes no liability in the event of damage to the rubber in the removal process. ECOguard is considered a permanent sealer and not intended to be stripped from the rubber as a standard procedure. This procedure is for restorative maintenance purposes only. To re-apply ECOguard please follow step 1.
Recommended Tools / Materials

- 21” paint tray
- Rectangular Mop Bucket
- Microfiber Mop
- Microfiber Mop Cover
- Applicator Trim Pad
- Applicator Trim Pad
- Mixing Paddle
- Safety Glasses
- Safety Knife
- Latex Gloves
- Shop Towels
- Rags
Warranty

All Ecore rubber flooring is guaranteed to be free from manufacturing defects on both material and workmanship. If such a defect is discovered, the customer must notify Ecore either through the contracting installer, distributor, or directly. If found to be defective within five years under normal non-abusive conditions, the sole remedy against the seller will be the replacement or repair of the defective goods, or at the seller’s option, credit may be issued not exceeding the selling price of the defective goods.

ECOfit and ECOfit Plus warranty shall not cover dissatisfaction due to improper installation, damage from improper maintenance or usage, or general misuse, including and without limitation: burns, cuts, tears, scratches, scuffs, damage from rolling loads, damage from cleaning products not recommended by Ecore, slight shade variations or shade variations due to exposure to direct sunlight, or differences in color between samples or photographs and actual flooring.

Excluded from Warranty

These warranties do not apply to the following:

1. The exact matching of shade, color, or mottling.
2. Any express or implied promise made by any salesman or representative.
3. Tears, burns, cuts, or damage due to improper installation, improper use, or improper cleaning agents or maintenance methods.
4. Wear from chairs or other furniture without proper floor protectors will void the warranty. Care should be taken to protect the flooring from damage by using good quality protective feet for chairs, tables, and other furniture. Chair mats may be required under chairs with casters/wheels.
5. Labor costs for installation of original or replacement material.
6. Sale of “Seconds,” “Off Goods,” or other irregular (non-first-quality) flooring materials. With respect to “Seconds” or “Off Goods,” such are sold “as is,” and ECOsurfaces makes no warranties whatsoever, express or implied with respect thereto, including warranties of merchantability or fitness for a particular purpose.
7. Problems caused by moisture, hydrostatic pressure, or alkali in the sub-floor.
8. Problems caused by uses, maintenance, and installation that are contrary to ECOsurfaces specifications, recommendations or instructions.
9. Material installed with obvious defects.
10. Damage to flooring products from high heels or spike heels.
11. Damage to flooring products from rubber mats or rubber backed mats.
12. Installation of ECOsurfaces products with adhesives other than those recommended by ECOsurfaces.
13. Fading and/or discoloration resulting from heavy sunlight penetration and ultraviolet ray exposure from direct or glass-filtered sunlight.
14. Material that is not installed and maintained as recommended by ECOsurfaces.
15. Damage to flooring products from pallet jack and tow-motor traffic.
16. Environments where the product will be exposed to animal fats, vegetable oils, grease or petroleum based materials. (i.e.: commercial kitchens or auto repair facilities.)
17. Premature wear and deterioration from spikes and skate blade exposure.
18. Differences in color between products and photography.
19. Embossing/density deviations between product and samples, photography.

These warranties are in lieu of any other warranty expressed or implied. ECOsurfaces shall not be liable for any incidental or consequential damages which may result from a defect. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. These warranties give you specific rights, and you may also have rights which may vary from state to state. To know what your legal rights are in your state, consult your local or state Consumer Affairs Office or your State Attorney General. For complete and latest warranty information for products within the ECOsurfaces collection, please visit www.ecorecommercial.com.
